

Bohm, D. (1992). *Thought as a system*. New York: Routledge

“Thoughting” is not thinking. When we re-circulate the same thoughts, Bohm posits that we are “thoughting.” We only think we are thinking. However, it is okay to do both, because when we bring forward prior knowledge (or thoughting), it does not suppress new ideas. In fact, “thoughting” can lead to thinking. Thinking goes into the brain and leaves a trace, which becomes thought, and thought then acts automatically in our system of thinking. (Reviewed by L. Westbrook, a thinker, an electronic library creator, and stay-at-home-mom)
